

New for 2011

VFlex guidance

The V-Flex Guidance system is DGPS 4U replacement for the Sirio light bar, it is a low cost upgradeable guidance system that uses the latest technology for the agricultural market. The V-Flex system consists of a 7" full colour touch screen display that is easy to see in daylight. There is a control box mounted on the floor of the machine and this houses the GPS receiver and also the Hillside Compensator, on the outside of the housing are 2 x serial ports with Radar output.

Features and functions

- ▶ Record every job including coverage area, start date and end date.
- ▶ Stores field boundaries against farm and field names.
- ▶ Optional automatic shut off for selected. fertiliser spreaders.
- ▶ Automatic field recognition.
- ▶ Building hillside compensator. ▶ Easy to install.
- ▶ Low cost system. ▶ Upgradeable.
